The Sixth Wolf-Creek Conference was held at the Ritz Carlton Hotel in Rancho Mirage from June 4, 2001 to June 7, 2001. Approximately 70 internationally renown experts on Cardiopulmonary Resuscitation attended the Conference and presented their most recent research findings. Four Army Medical officers attended and observed the Conference. The experts specifically focused on issues of optimizing waveforms and emergencies for defibrillation, mechanical options for improving blood flow during cardiac arrest, more optimal vasopressor interventions during CPR, myocardial and cerebral preservation during CPR, and outcome measurements. The proceedings of the Conference will be published in a *Supplement of the Journal of Critical Care Medicine*.

The Sixth

Wolf Creek Conference on

Cardiopulmonary Resuscitation

*June 4 – June 7, 2001
Ritz Carlton Hotel
Rancho Mirage, California*

*The Wolf Creek Conference
On
Cardiopulmonary Resuscitation*

The so-called Wolf Creek Conferences of CPR researchers were initiated by Doctors James Elam, James Jude, and Peter Safar. The objective was to improve the clinical practices of cardiopulmonary resuscitation by stimulating laboratory and clinical research. There was great need of objective data such that guidelines on resuscitation might be secure. The first meeting of some 10 investigators was hosted in 1975 by Dr. James Jude at his "Wolf Creek Lodge" in Georgia. The proceedings were published by Doctors Safar and Elam as part of a monograph entitled *Advances in CPR* by Springer-Verlag in 1977. The second meeting occurred approximately five years later. It was chaired by the late Dr. Joseph Redding. The proceedings appeared in *Critical Care Medicine* in 1981. The third was held approximately five years later and it was organized by Doctors Nicholas Bircher, Mickey Eisenberg and Charles Otto. The Fourth Wolf Creek Conference was held in Palm Springs, California in September 1996 convened by The Institute of Critical Care Medicine under the chairmanship of Dr. Max Harry Weil. The proceedings were published in *New Horizon*. The Fifth Conference was in Rancho Mirage, in June 1998 at the Ritz Carlton Hotel. The proceedings were published as a Supplement to *Critical Care Medicine*.

This will be the sixth of these expert conferences. The initial objective of these conferences was at least partially accomplished, and the field of resuscitation science has grown impressively. New capabilities for cardiac resuscitation with newer waveform automated external defibrillators greatly expanded capabilities for defibrillation. A number of new mechanical compression-decompression methodologies have emerged. The futility of the pulse check, the limitations of currently used vasopressor agents and anti-arrhythmic drugs, and the decreased emphasis on ventilation in settings of dysrhythmic cardiac arrest have been demonstrated. Increasingly larger emphasis on resuscitation research has prompted more vigorous clinical, laboratory, and bioengineering research more recently sparked by the impetus of the PULSE Consortium. It is, therefore, timely that another Wolf Creek Conference be held for exchanges between active research workers on CPR. Once again, we anticipate publication of the proceedings as a Supplement to *Critical Care Medicine*.
